

**DRIVELINE REPAIR,  
 MANUFACTURING &  
 PARTS**

Keep your fleet operating at peak performance and efficiency with our exceptional driveline repair services. Our expert technicians are available 24/7 on the road or in the shop to get you back on track in no time.

**UNDERSTANDING HOW THE DRIVESHAFT WORKS**

The driveshaft is a long steel tube that transfers torque at varying angles between driveline components. It transmits torque from the engine to the wheels making the vehicle move. The driveshaft assembly is made up of the propeller shaft, universal joints, slip splines and yokes. It is important that the driveshaft assembly is flexible in order to account for the vibration in the drivetrain axles during acceleration and braking.

**DRIVELINE REPAIR SERVICE**

Are you in need of driveline repair? Our in-house driveline shop offers industry-leading custom repair and manufacturing solutions that we ensure will meet or exceed OEM parts.

**DRIVELINE PARTS & COMPONENTS**

No matter your need, avoid downtime with drive shaft parts you can always count on from Blaine Brothers. From repairs, rebuilds, replacement, installation we cover it all to be your one-stop shop!

Drivelines • Carrier Bearing • Constant Velocity (CV)  
 Universal Joints • End Yokes • Flange Yokes • Slip Yokes •  
 Stub Shafts • Tubing • U-Joints • Weld Yokes

**PREVENTATIVE MAINTENANCE**

Inspections of the driveshaft should be part of your routine maintenance. To minimize recurring mechanical problems and driver discomfort, regular vehicle maintenance and inspections are required.

Things to look out for:

- Shudder and vibrations
- Unusual noises when you accelerate
- Problems turning
